

Vid. 1

To Calculate ROI (Return on Investment)

Take the net income and divide by cost investment and then multiply it by 100.

$$ROI = \left(\frac{\text{Net Income}}{\text{Cost of Investment}} \right) \times 100$$

→ Investing in something that doesn't cost much is one way to improve the ROI.

→ Increase in net income, can also improve ROI

Companies use Salesforce to improve customer satisfaction and increase in customer retention.

98% of businesses meet their ^{ROI} goals with customer 360.

CRM: (Customer Relationship Management)

It is the system that helps manage the relationships between businesses and customers.

Disconnected systems → Inefficiency (no shared data)

Counted system → united and shared data
It Reduces complexity & costs.

- Customer 360 gives you entire Business
- Automation
- Intelligence
- Real time data
- Customer experience.
